

Measure, define and operate

Intelligent Locking – no key required

Simons  Voss
technologies

Measure and select the right locking cylinder.

Before ordering the locking cylinder, the required cylinder size first needs to be measured. Inside and outside dimensions are required. A rule or measuring template is used to measure from the centre of the fastening screw to the end of the inlay.

The cylinders are available in length intervals of 5 mm, i.e., 35 or 40 mm. The cylinder housing should seal as flush as possible. For example, if you measure an external length of 38 mm, you should order a locking cylinder with an outside length of 40 mm (VdS allows an excess of up to 3 mm).

Once you've taken the measurements, it's time to select the appropriate cylinder.

There are a wide range of digital locking cylinders available. For example the version with access control, for doors with multi-point locking and fittings with a core protection adapter.

As a half cylinder, it offers you solutions for use in garage doors and lockers, to name but a few.
