SENIOR EMBEDDED FIRMWARE ARCHITECT (M/F/D)

WHAT YOU SHOULD EXPECT

- Conception and system development of embedded firmware for our extremely low-energy mechatronic systems.
- Design, implementation and verification of the application
- Development and implementation of software architectures and platforms
- Creation of methods and tools for systematic and in-depth analysis of development results
- Creation of concepts for new functionalities, coordination and implementation incl. product tests and creation of corresponding documentation
- Conception of product tests accompanying development and series production in close cooperation with quality management

WHAT WE ARE LOOKING FOR

- Successfully completed degree in electrical/communications/automation engineering or comparable qualification with several years of professional experience.
- At least 5+ years of practical experience with "bare metal" embedded C/C++ programming
- Experience with device driver software, DMA, interrupt techniques and security architectures
- Sound knowledge of agile development processes
- Experience in the field of analogue circuit technology desirable
- Good knowledge of German and English for cooperation with our international development partners

OUR OFFERING

- Demanding job with great scope for creativity in a growth market at one of the most innovative technology companies in Germany
- Future-proof job in a growing international company
- Personal and professional development supported by an extensive range of seminars and training courses
- Flexible working hours and mobile working
- 30 days of vacation
- Capital-building benefits and company pension
- Kita / Kiga allowance, fitness allowance for private sports activities and much more

ABOUT US
