// Time schedules and event logging

Time schedules are used to determine who has access where and when. Event logging lets you see who entered rooms at certain times.

// DoorMonitoring – The smallest wireless door monitoring system in the world

Integrated sensors in the cylinder monitor door status and record any changes in terms of status. Crucial information is forwarded in real time, indicating whether the door is open or closed, the dead bolt is completely retracted or extended and if the door has been locked once or double locked or has been open too long.

// Notifications, fully automatic

With the help of Event Management, notifications for predefined events or alarms are automatically transmitted via push message to your smartphone or by e-mail.

// Key4Friends

With the MobileKey online extension, temporary access authorizations, e.g. for service providers or customers and guests, can be transmitted by e-mail. Your Key4Friends is valid for up to 6 months and can be extended as often as you like.
