THE COMPLETE WORLD OF DIGITAL LOCKING

Convenience, transparency and security.
with SimonsVoss locking systems

Rapid digitisation, new security requirements such as the EU GDPR and increasingly more flexible working time models: mechanical locking systems are no longer able to keep pace with developments in today's world. Modern, secure, flexible locking is digital in its operation, using a SimonsVoss locking system. Incidentally, digital locking systems can easily replace mechanical locking devices anywhere with no need for cabling, installed in new or old buildings, on few or many doors, in a single building or on several separate sites.

// Greater control and security

At SimonsVoss, security implies much more than being able to deactivate electronic keys instantly. Security also means that our electronic keys are protected against unauthorised copying. Our solutions allow you to control restricted areas centrally with wireless door monitoring and record every access.

// Greater convenience

An electronic key for all entrances and button-operated opening and locking provide door security with trouble-free access for your employees. You have a complete overview of which users gain access through each door at particular times and you can modify access rights instantly and flexibly. Unrestricted locking control thanks to a central digital identification medium.

// Made in Germany

We have manufactured all components at our production facility in Germany since our inception as a digital locking technology pioneer. For us, Made in Germany means reliability and a long service life for mechanical components, trouble-free operation and, last but not least, minimum power consumption.

// Completely future-proof investment

We have always taken an approach where all SimonsVoss locking systems can be upgraded with new software and new components at an affordable price, even years after initial installation. That's why we ensure our products and systems feature full backward and forward compatibility. Moreover, our digital locking and access control systems are compatible with all standard time-and-attendance and billing systems.

THIS IS SIMONS VOSS

SimonsVoss, the pioneer in remote-controlled, cable-free locking technology provides system solutions with a wide range of products for SOHO, medium and large-sized businesses as well as public institutions. SimonsVoss locking systems combine intelligent functionality, high quality and award-winning design Made in Germany. As an innovative system provider, SimonsVoss focuses on scalable systems, high security, reliable components, powerful software and simple operation. As such, SimonsVoss is regarded as a technology leader in digital locking systems. Our commercial success lies in the courage to innovate, sustainable thinking and action, and heartfelt appreciation of employees and partners.

SimonsVoss is a company in the ALLEGION Group, a globally active network in the security sector. Allegion is represented in around 130 countries worldwide (www.allegion.com).

SimonsVoss offers cross-sector solutions for new or existing buildings with its product lines System 3060, MobileKey and SmartIntego.

Digital locking technology can be retrofitted quickly and flexibly – whether for external doors, access to the server room or for highly complex connections of doors, gates and cabinets to create a centrally controllable system.

Which solution do you need? Find out how SimonsVoss can support you now.
