SmartRelay 3 Advanced

SmartHandle AX

Digital cylinder

## KEYLESS WORLD

# Changing access authorisations – without on-site personnel

◎ The finest in keyless security

**Simons≡Voss** technologies

## Digital locking systems have many advantages over mechanical systems.

// Changing access authorisations at any time – without the need for on-site personnel.

// Time and cost savings when changing employees.

// All authorisations and locks are clearly visible at all times.

// Flexible response when converting areas due to rental and security requirements.

// Emergency release (e.g. also for fire alarm systems) or emergency closure of individual locks or entire areas in real time.

// Management of digital locking cylinders, door fittings and SmartRelays via online or virtual network by facility management or the security control centre.
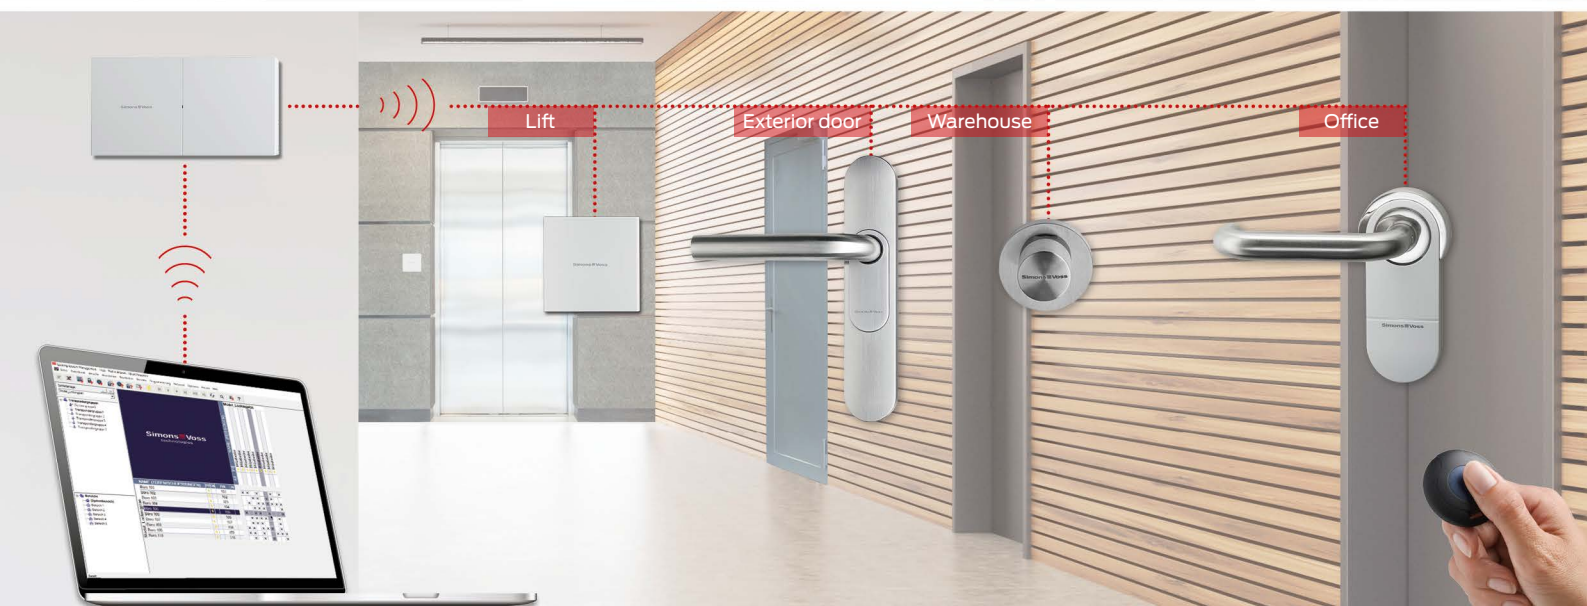

// Subsequent networking – without complex door wiring.

# HOW MUCH "ONLINE" WOULD YOU LIKE?

## Choose between virtual and online networking or combine both.

Gateway

Lift | Exterior door | Warehouse | Office

## VIRTUALNETWORK

In the virtual network, data is exchanged via gateways installed in the entrance area.
These gateways transfer access authorisations to transponders and cards, for example.

Lift | Exterior door | Warehouse | Office

## ONLINENETWORK

The locking management system software and all locking devices
are linked wirelessly – essential for data exchange in real time.
This is also available as an optional extension for your virtual network.

In the **online network**, DoorMonitoring optionally **displays** the status of each door,
enabling critical areas to be managed efficiently.
