1.0 INTRODUCTION

Locking System Management (LSM) from SimonsVoss is a database-supported software package that enables you to create, manage and control complex locking plans efficiently. This documentation serves as a guide to help you structure and configure your locking plan. It will also assist you later on when it comes to monitoring and controlling the locking system, making management of the system easier.

1.1. IMPORTANT NOTE

SimonsVoss Technologies AG shall assume no liability for damage caused by incorrect assembly or installation.

Access through a door may be denied if components are incorrectly assembled or programmed. SimonsVoss AG shall assume no liability for the consequences of incorrect installation, such as denied access to injured persons or persons at risk, damage to property or any other form of damage.

The LSM menu items are indicated in this manual by the **C** symbol.

EXAMPLES

EditArea

HEADINGS AND CHECKBOXES

Headings and checkboxes shown in the screenshots are differentiated by the use of inverted commas.

EXAMPLES "User Groups" "Areas"

BUTTONS

Buttons shown in the screenshots are highlighted in grey.

EXAMPLES OK Apply

KEY COMBINATIONS

The key combination you can use to start the required functions is shown in bold.

Ctrl+Shift+X

PATH SPECIFICATIONS

If an instruction refers to a directory on a drive, the path is provided in italics.

EXAMPLE *C:\Program files\SimonsVoss\LockSysGui*

NOTE

The specification *[CDROM]* is a variable and describes the letter identifying the drive of the CDROM drive on the computer (e.g. "D") on which installation is to be carried out.

3.2. AREAS / TRANSPONDER GROUP VIEW

A black cross with a circle inside it represents group authorisation.

A grey cross with a circle inside it stands for "inherited authorisation.

3.3. DOORS / PERSONS VIEW

Authorisation that has been enabled but not yet programmed into the lock

Authorisation that has been programmed into the lock

Authorisation that has been removed and not yet transferred to the lock

Authorisations that have not yet been programmed which comply with the group structure of the locking system, in other words that originate from the group view, are indicated by a small black triangle

Programmed authorisations that comply with the group structure of the locking system, in other words that originate from the group view, are indicated by a small black triangle

Removed authorisations that comply with the group structure of the locking system and have not yet been programmed

Authorisations that do not comply with the group structure of the locking system are indicated simply by a cross, with no black triangle (individual authorisation).

Authorisations that have been subsequently withdrawn, contrary to the group structure of the locking system, feature a black triangle but no cross indicating authorisation.

White (grey) box: authorisation can be enabled here.

Checked (greyed out) box: this field no longer belongs to the locking system and no authorisations can be enabled. You have no write permission or the locking plan blocks this box (e.g. when a transponder is deactivated).

3.4. GROUP AUTHORISATION TREE VIEW

Manually enabled (black)

Directly inherited (green)

Indirectly inherited – inherited via subordinate group (blue)

Directly and indirectly inherited (blue / green)

3.5. PROGRAMMING REQUIREMENT

EXPLANATION

There are various reasons why it may be necessary to program a transponder or lock. The programming lightning symbol is shown in different colours to indicate the different reasons why programming is required.

DISPLAY

Simple programming requirement for components

Transponder:

- Validity expired
- Deactivated

Lock

- Only overall locking level assigned
- Not assigned to any door
- Not assigned to any locking system
- Door without lock

5.0 MANAGING THE LOCKING SYSTEM

- 5.1. LOCKING SYSTEM
- 5.1.1 GENERAL INFORMATION ABOUT THE LOCKING SYSTEM

EXPLANATION

A locking system consists of a group of locks and the associated transponders. In the software it is possible to create and manage multiple locking systems simultaneously. They are represented by a matrix.

"Do not modify groups"	→	The selected transponder(s) are relocated to a different group. The transponders are given a TID from the reserve for the new transponder group. This means the transponders will need to be programmed.
"Do not modify transponders"	→	The selected transponder(s) are relocated to a different group. The transponders keep the same transponder ID. This means the locks for which the transponder's old and new transponder groups are or were authorised will need to be programmed.

5.2. TRANSPONDERS

5.2.1 GENERAL

EXPLANATION

Transponders are the "keys" for digital locking systems. You can use transponders to operate digital locks. At SimonsVoss, the term transponders also includes cards as passive media. Where features apply only to cards, this is specifically indicated, but in all other cases, the explanations apply to both a transponder and the card medium.

6.0 PROGRAMMING PROCESSES

6.1. GENERAL

EXPLANATION

A programming requirement applies when a right is modified and a component has not yet been programmed, or if the software detects a difference between the actual and target status. Before programming it is important to ensure that the view is up to date and the data has been backed up.

PROCEDURE

(To display the programming requirement in the matrix)

- Options
- C Extra columns
- Select object
- Programming requirement

6.2. POSITIONING COMPONENTS

EXPLANATION

To achieve optimum results and avoid programming errors , a defined distance should be maintained between the programming device and the components you want to program.

NOTE

If the distance is too little or too great, errors may occur. When programming the card, please lay the card on the SmartCD.C or SmartCD.HF.

Page 36

6.3. G1 CARDS

6.3.1 PROGRAMMING

EXPLANATION

When you program the card, you tell it what its transponder ID is, which locking system it belongs to, what the password for the locking system is and which time group it belongs to.

PROCEDURE

- Position card (see 2.2 Positioning components)
- Select card in matrix
- **C** Programming

"Data records from other ..."

→ When this option is selected, data records from other locking systems are not overwritten. An additional data record is written when you program the transponder, assuming that there is another free data record available (does not apply to cards)

6.3.2 READING

EXPLANATION

A programming device (config device) is needed to write data to the components. Please refer to the "LSM Administration Manual" or the product manual for installation and configuration information.

When you read the card, the data stored on it is read with the aid of the SmartCD.C and if possible assigned to an owner.

PROCEDURE

6.3.3 RESETTING

EXPLANATION

When a card is reset, the data stored on it is removed and the card's actual status is deleted in the software.

PROCEDURE

- Position card (see 2.2 Positioning components)
- Select person in the matrix
- **C** Programming
- CRead/reset card

Note:

If a card is not recognised, it can be reset by specifying the sector number and the locking system password.

7.0 MISCELLANEOUS

7.1. CREATING A REPLACEMENT CARD

USE

This procedure should be used when a card has been lost.

EXPLANATION

When you create a replacement card, the original card is blocked and a new one is created with the same authorisations and a similar designation.

PROCEDURE

- Right-click on the original card
- **>** New
- **Contemporation** Replacement transponder
- Confirm query with Yes
- Enter additional information and confirm
- Enter new serial number

RESULTS

- Card needs to be programmed
- Affected locks need to be programmed
- The card's ID number is permanently blocked

7.2. PROCEDURE FOR DEFECTIVE CARDS

EXPLANATION

If a card is defective, you must tell the software that the old card no longer works before programming a new one.

PROCEDURE

- Right-click on the original card
- Properties
- **C** Transponders

or

- Edit
- Cransponders

then

- Software reset
- Select reason
- Enter additional information if required
- Confirm twice with Yes
- You can now start programming the new card

RESULTS

• Actual status of the original card is reset

NOTE

Resetting the software and then programming another card can lead to a security loophole. It is possible to create two cards with the same data. It must be ensured that the original card really is defective. In this case a replacement card (see 3.1 Creating a replacement card) must be created."

10.0 GLOSSARY

This list is not exhaustive.

А

Access lists

Storage of transponder data in the locks with access control function. Please note the valid health and safety and data protection regulations when using this data.

Alerts

You can use alerts to promptly display certain statuses.

Area

The area is a combination of several doors.

Audit-compliant

A log is described as audit-compliant if the information about changes in a system in the database is archived such that it can be found again and traced, cannot be changed and is protected from falsification.

С

Checkbox

Option of selecting a property in the graphic interface

D

Database-supported

Software that stores data in a specified structure, the database. The locking system database includes the locking plan and the locking systems.

Door

You have the option of saving additional information on the door, which also manages the locks.

Е

Emergency opening

Procedure for opening a lock without an authorised transponder. Emergency opening is protected by passwords.

Event

An event is a change in status reported to LSM via the network.

Export

During the export process, the selected locking plan data is transferred to the PocketPC.

F

Filter

A filter limits the view to data grouped / sorted by the selected property

Page 49

G

Group authorisation

Group authorisations provide the option of authorising several transponders to several locks at the same time.

GUI

Graphical User Interface for operating the software.

Н

Handheld

A handheld / PocketPC is a small computer that can be used for mobile programming.

Hierarchy

Hierarchy is a system of elements that are superordinate or subordinate to one another.

L

Import

During the import process the exported locks are transferred back to the locking system after processing.

L

Lock

Lock can be understood as meaning SimonsVoss products that evaluate an authorisation and enable opening.

Locking plan

The locking plan contains all the authorisation and system information, user management and may include several locking systems.

Locking system

The locking system structures the created transponders and doors and manages access authorisations.

LON

LON is a wired communication system for building automation. SimonsVoss components can network technology and products that meet this standard and therefore be operated online

LSM Mobile

Software for a handheld / PocketPC for mobile management and programming of the locking system.

Μ

Matrix

The matrix is the graphical view of authorisations in LSM.

Page 50

Ν

Network

The SimonsVoss network enables the locks to be directly addressed without the programming device.

Network address

The network address allows you to clearly recognise each lock node, which is fitted on the door and stored in the software as being assigned to the door.

0

OMRON mode

All product versions can be operated in OMRON mode. If you would like the Smart Relay to transfer the transponder data to an external system and a remote opening command to be sent to the cylinder when transfer is activated from the Smart Relay by the external system, select this option on both the Smart Relay and the cylinder. Please note: If you use this configuration, it is no longer possible to open the cylinder using the transponder! Please refer to the Smart Relay Manual for an exact description.

Overlay mode

In overlay mode 8 transponder IDs are reserved for a created transponder and programmed into the authorised locks. If the first transponder is lost, the transponder ID is deactivated in the software and the new transponder is assigned the next transponder ID from the reserve TIDs. When the transponder is used to open a lock, the system recognises that this is one of the 7 reserve TIDs and deactivates the previous transponder ID.

Ρ

Password

The security of passwords depends on the complexity and length of the password. Passwords are used to protect the locking system in several parts of the system

Period of validity

The period of validity is a time frame in which the transponder will function. The transponder is deactivated outside this time frame.

Person

Person allows you to store additional information about a user.

PocketPC

A handheld / PocketPC is a small computer that can be used for mobile programming of locks.

Programming requirement

Programming is required if there is a difference between the actual and target status, either due to a change in access authorisations or configurations.

Public holiday

National or company-specific holiday or period of several days off.

Page 51

Public holiday list

A public holiday list is a compilation of selected public holidays and is used in the time zone plans.

R

Reserve

A reserve shows the number of G1 transponder IDs in the selected transponder group.

Reset

During the reset process the data on the object is deleted and the actual status of the software set to "unprogrammed"

S

Search

Search enables you to jump directly to an object in the locking system or database

Т

Task list

List of tasks available in the system

Time group

A transponder can be assigned to a time group and when used in conjunction with a time zone plan, creates time-controlled access.

Time group name

Time group name is the pre-defined time group name assigned to the time group number of a transponder

Time group number

The time group number of a transponder can be set individually and is specified by the administrator. The transponder is approved or rejected in a lock time zone plan according to this group.

Time zone

Time zones are areas that can only be accessed by certain transponder groups at certain times.

Time zone plan

Object for time-controlled access on locks for areas and transponders. Public holiday lists can also be incorporated here.

Transponder

The transponder is the "electronic key" in the system 3060.

Transponder group

The transponder groups is a combination of several transponders for managing group rights.

Page 52

W

WaveNet

WaveNet is an extremely flexible SimonsVoss network that can use both wired and wireless connections.

Write access

The right to make changes. Certain roles in LSM user management, such as using handheld devices, managing a network or configuring a network, require write access in the database before they can be performed.
